

INTRODUCTION

The present catalogue contains a listing of all the available publications of the Geological Survey of Pakistan (GSP). These include technical reports and geological and other thematic maps produced as a result of GSP's continuing basic and applied research. It is reflective of the relentless efforts made by the GSP in accumulating enormous data about the country through a coherent programme of field surveys, laboratory studies and data interpretation.

The publication of this catalogue has been necessitated because of the growing demand for GSP's data and information for multifarious uses by universities and research organization; government departments; industry and mining & oil companies; defence services; land, water & natural resource developers; engineering consultants and contractors; and the NGO's involved in various socio-economic and environmental issues.

The publications listed in this catalogue are available both for studies and sale at the GSP offices at Quetta and Islamabad. This catalogue and its updates can also be accessed through GSP web site <http://www.gsp.gov.pk>.
